

The Engineering New Zealand/Water New Zealand Rivers Group Student Research Grant

Closing Date: 17 August 2020

Funding Opportunities:

Grants of up to \$1,000 (\$3,000 fund available in total) are available to postgraduate researchers working on issues related to rivers, flood risk management and the operational and environmental issues of catchments and river systems, depending on the merits of the project proposal and the level of competition in a given year.

What We Fund:

The research grants are aimed at supporting research that is focused on New Zealand's rivers, catchments and management of flood risk, including cultural health, water quality, water quantity, flood management, energy generation and environment protection, as well as promoting a multi-disciplinary approach for river management, that reflects cultural and societal diversity in an integrated and holistic manner. Projects that further our knowledge of river processes, including climatic, biotic, chemical, geologic, and/or hydrologic interactions, are also encouraged. Our key objectives can be found here <https://riversgroup.org.nz/about/>.

The fund is also intended to foster links amongst academe and partners in government, community groups and the private sector. We encourage broad sharing of project results, and thus we ask recipients to present their findings at the annual Rivers' Group forum or submit a report for publication in the Group's newsletter *Flow*.

Eligibility Criteria:

- Applicants must be enrolled for a postgraduate degree at a New Zealand institution
- Applicants need NOT be members of Engineering New Zealand to apply, though they are encouraged to become members of the Rivers Group.

Note that the fund is not intended to cover tuition, only costs related to research.

Application Process:

In addition to filling out the attached form, please provide the following:

- Applicant's academic CV
- Short note of support from academic supervisor, highlighting the candidate's qualifications for this work, and confirming that the project can be completed within the proposed timeframe.
- An itemized budget for the proposed work
